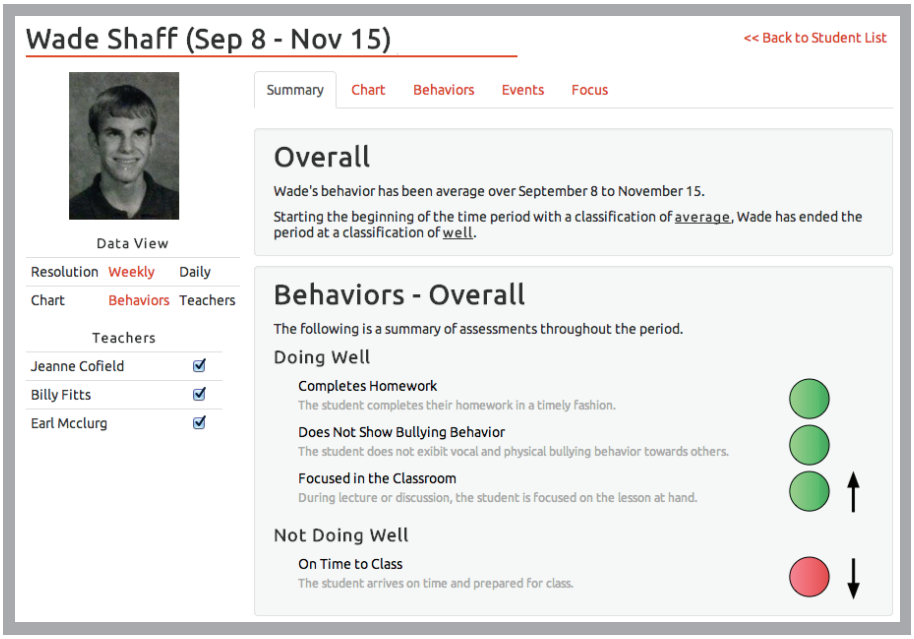
INTERVENTION MANAGEMENT
*FOR* DATA DRIVEN SCHOOLS

MR. ELMER FOR SCHOOLS



## INTERVENTION MANAGEMENT FOR RTI, MTSS, AND PBIS

Too often interventions can be viewed in a silo of one classroom and one teacher. Get everyone looking at the same student, same data, and same reports together. Now be confident in your assessments with the transparency of your colleague's interpretations.

Automatically track and organize academic and behavior trends. Focus on students with specific needs. Spend more time on the interventions when the tracking is done for you.

## CONTINUOUS ASSESSMENT OF STUDENT INTERVENTIONS

Frequent intervention assessments let you know where your students are day by day and week by week. With our micro-assessments, teachers and staff need only seconds to assess a student's progress on their computer or phone. Assessments are automatically compiled and graphed for transparency, focused updates on behavior improvement and effectiveness of RTI, MTSS, or PBIS interventions.

## BEHAVIOR ASSESSMENTS TAILORED TO EACH STUDENT

Every student's behavior management needs are different, just like their interventions. Track unique behaviors and set unique targets for each student, rather than a generic list of traits. Schedule behavior micro-assessments for each student, based on their need. Teachers and staff can now feel more confident about observations and interventions.

## REPORTING FOR IEPS, 504S, PARENTS

Know if interventions are effective in real time. No matter how unique the behaviors, all behavior data is automatically analyzed and reported for each student. View and share results with parents and staff to keep everyone on track with progress updates. Weeks do not have to pass before discussions can take place concerning a noticed change in attaining an IEP goal or 504 intervention.
